

You are a pilot of a spaceship. You have to travel home from a star base. The only way is to take the space tunnels that connect through three space stations. However, it takes a lot of fuel to travel through a space tunnel. For each space tunnel it takes one energy capsule. You have 6 energy capsules at the star base, but your spaceship can only carry 3 at a time and you will have to pass through 4 space tunnels. You can store energy capsules at the space stations.

Load 3 capsules onto your ship. Use 1 to get to station "One", drop 1 off at station "One", and use the third capsule to return to the Star Base.

Pick up the 3 capsules at the Star Base, use 1 to get to station "One" and pick up the capsule you left at station "One". You now have 3 capsules and you can get all the way home from station "One".
