

The object of this puzzle is to place two stars, the size of one square, in each column, each row and each white-edged part of grid. The stars must not touch each other, even diagonally.

The puzzle can be solved with the help of logical reasoning only, and without guessing. Though at places logical reasoning is quite sophisticated.

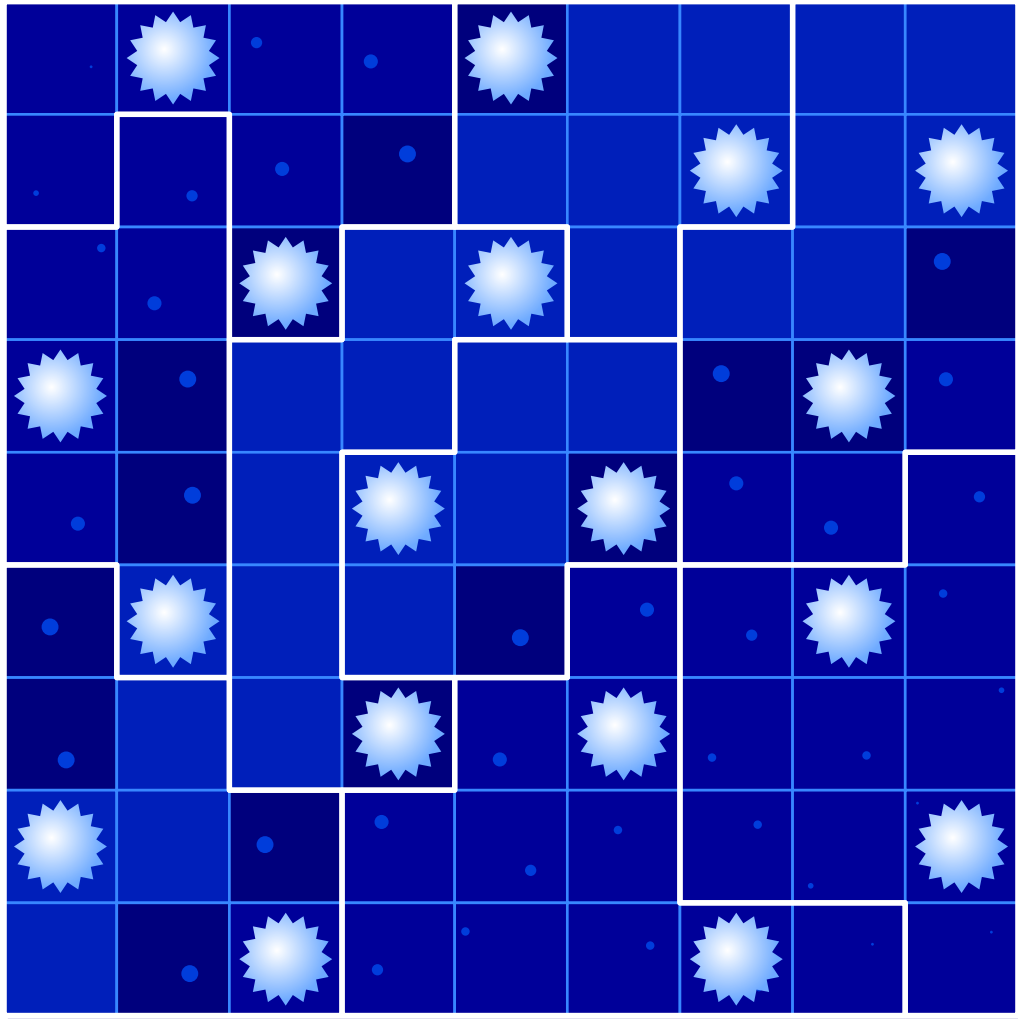

*The puzzle in its original pencil-n-paper version was presented at the 5th 24 Hours Puzzle Championship, May 21-23, 2003, Budapest, Hungary.

Star Battle
